## Built-in AI and the tools agencies ask for

**Spots fake photos**
AI flags images that look edited or AI-made, so every proof you send is real.

**Picks the best shot**
Your client's proof page opens with the strongest photos first.

**Finds it without GPS**
AI reads street signs and landmarks to suggest an address, labeled "estimated".

**Works in dead zones**
Photos save on the phone and upload by themselves when the signal returns.

**Proof on your domain**
Share a live link at your own address, like proof.youragency.com.

**Habla español**
A Spanish version of the app for your field team.
